Viroqua Food Cooperative**

Much planning was done to complete this design/build project of a very unique 7,500 sq. ft. grocery store with a full deli, kitchen, and walk-in coolers. Meeting the owners request, *Green Building* was factored into the design and construction: polished concrete (with fly ash) floors, open wood-framed trusses (for natural light), recycled blue jean insulation, recycled VCT flooring, and many more unique design features. The end result is a building exactly as the owner envisioned while meeting their time and budget requirements.
